“half-time” in Stuttgart, 14 of the 28 chalice- shaped concrete supports now completed

Date
27.02.2021

We have now completed 14 of the 28 chalice-shaped concrete supports which form the roof of the new main railway station. The underground train hall will be illuminated by huge skylights, creating a bright, welcoming ambiance. Visitors will be able to walk on the station's roof, which will create a new urban space right next to the Schlossgarten park. photo: © ingenhoven architects / Achim Birnbaum
